MySQL Replication Setup Demo

MySQL Replication setup

- MySQL Master (already exist).

- MySQL Slave (Have to built One with MySQL Installed).

- Check Connectivity between both.

- Change my.cnf on Master to add replication options.

- Create Replication user on Master (slave will use this user to connect).

- Enable Bin-Log if not already enabled.

- Get bin-log position.

- Take full backup for all databases on Master.

- Change my.cnf on Slave to add replication options.

- Restore databases on slave.

- Set master host on slave

- Start Replication
